Wednesday Challenge Form

Group Members: Garrin, Monteh, and me

Problem Statement: Estimate how many candy corn it takes to completely cover an 8.5x11 inch paper

Approach: We found the area of the paper and divide it by the area of the base of the candy corn.

Solution: Based on our equation, we got 704 Candy corn, but we rounded down to 700

Lessons Learned: We need to be more precise with our equations.
